

InGaAs linear image sensors

G9203-256DA G9204-512DA

Near infrared (0.9 to 1.7 µm) image sensors

The G9203-256DA and G9204-512DA are InGaAs linear image sensors that deliver high sensitivity and stability in the near infrared region. A charge amplifier array comprised of CMOS transistors, a shift register and a timing generator, etc. are assembled with an InGaAs photodiode array. Low cost is also achieved by using inexpensive ceramic packages. Feedback capacitance for the signal processing circuit formed on the CMOS chip can be selected from 10 pF or 0.5 pF by external voltage.
